

To our valued customers and partners,

SIE Computing Solutions, Inc. is pleased to announce that we have achieved the AS9100 quality management system (QMS) standard certification! SIE's quality system is built on a commitment to continuous improvement, and AS9100 compliance will become an integral part of our company's internal quality processes that have been honed over the last decade.

"Our culture of continuous improvement has defined our approach to product development, program management and manufacturing," said Chris Boutilier, president and CEO of SIE Computing Solutions. "AS9100 is about more than just training and documentation, but is part of a quality system that is at the core of what our company provides to every single one of our customers."

SIE Computing Solutions boasts an almost forty-year legacy of providing open architecture systems to the military, transportation, oil & gas exploration, medical, telecommunications and other industrial/emerging markets. As a preferred vendor to the world's largest defense and industrial companies, our customers leverage best-in-class processes from initial concepts, design and development, prototypes, certifications and production. All SIE enclosures, backplanes, system integration and custom solutions are developed with a board-agnostic approach to match the precise specifications and supplier preferences of our customers. For more information, please visit <http://www.sie-computing.com>.
